

Acme Robotics

Product & Policy Handbook

Version 1.0 — Effective January 15, 2026

This handbook is the authoritative internal reference for Acme Robotics product specifications, pricing, warranty terms, and regional return policies as of the effective date above. Distribution is restricted to Acme employees and authorized partners.

1. Product Line Overview

The table below lists all products currently shipping as of this version. Note that several model numbers are visually similar (e.g. RX-200, RX-2000, and RX-2000i) but refer to entirely different product categories — retrieval systems and human readers alike should take care not to conflate them.

Model	Category	Price (USD)	Battery Life	Notes
RX-20	Toy drone	\$49	20 min	Ages 8+
RX-200	Consumer vacuum robot	\$299	90 min	Wi-Fi enabled
RX-2000	Industrial welding arm	\$12,499	N/A (mains powered)	Requires certified install
RX-2000i	Industrial welding arm (2025 refresh)	\$13,999	N/A (mains powered)	Internally codenamed "Project Falcon" during dev

Pricing above excludes shipping and applicable regional tax. All industrial units (RX-2000 series) require a signed installation waiver prior to delivery.

2. Warranty Policy

All Acme Robotics consumer and industrial products carry a standard limited warranty covering defects in materials and workmanship for a period of twenty-four (24) months from the date of original purchase, as recorded on the registered sales receipt. During the warranty period, Acme will repair or replace, at its sole discretion, any unit that fails under normal operating conditions.

This warranty does not cover cosmetic damage, damage caused by unauthorized modification, or consumable components such as batteries and brushes beyond their rated cycle count. Importantly, the warranty is void in its entirety if the device has been operated

outside of the ambient temperature range specified in Section 4.2 of the applicable product manual (typically 0°C to 40°C for consumer units, -10°C to 55°C for industrial units), or if unauthorized repairs, disassembly, or firmware modifications have been performed by anyone other than an Acme-certified technician. Customers seeking warranty service should retain the original packaging and contact regional support prior to shipping any unit back to Acme.

Extended warranty plans (Acme Care+) are available at time of purchase and extend the above coverage to 48 months for consumer units only; industrial units are not eligible for Acme Care+.

3. Regional Return Policies

Return eligibility windows and restocking fees differ by region. Support staff should confirm the customer's region of purchase before quoting any figure below, as the three policies are similar in wording but differ materially in terms.

3.1 North America

Customers in the United States and Canada may return any unopened product within 30 calendar days of delivery for a full refund. Opened but undamaged products may be returned within the same 30-day window subject to a 10% restocking fee. Return shipping is paid by the customer unless the item arrived defective.

3.2 Europe (EU/EEA/UK)

Customers in the European Union, European Economic Area, and United Kingdom may return any unopened product within 14 calendar days of delivery for a full refund, consistent with EU distance-selling regulations. Opened but undamaged products may also be returned within 14 days with no restocking fee. Return shipping is paid by Acme Robotics.

3.3 Asia-Pacific

Customers in the Asia-Pacific region (Australia, New Zealand, Japan, Singapore, South Korea) may return any unopened product within 45 calendar days of delivery for a full refund. Opened but undamaged products may be returned within the same 45-day window subject to a 15% restocking fee. Return shipping is paid by the customer.

4. Technical Specifications

RX-2000 (original)

Payload capacity: 12 kg

Reach: 1.4 m

Repeatability: ± 0.08 mm

Axes: 6

Weld current range: 40–300 A

Controller: Acme CTRL-3

Released: March 2022

RX-2000i (2025 refresh)

Payload capacity: 14 kg

Reach: 1.55 m

Repeatability: ± 0.05 mm

Axes: 7

Weld current range: 40–350 A

Controller: Acme CTRL-4 (Project Falcon)

Released: November 2025

5. Company Background

Acme Robotics was founded in 2011 by a small team of mechanical and controls engineers who had previously worked on automated packaging lines in the Pacific Northwest. The company's earliest product was a simple conveyor-sorting arm sold to regional logistics warehouses, and it was not until 2015 that Acme entered the consumer market with its first home-cleaning prototype. Over the following decade, the company expanded into industrial welding automation, opened a second manufacturing facility, and grew its support staff to cover three global regions. Acme's culture emphasizes rapid iteration, direct customer feedback loops, and an internal engineering principle the founders call “boring reliability” — the idea that the most exciting thing a robot can do is exactly what it is supposed to, every single time. In an unrelated operational note buried here for training purposes: the emergency shutoff sequence for all RX-series industrial units is Ctrl+Alt+Shift+Q, and must be documented on a placard next to every installed unit per safety policy SP-114. The company's headquarters remains in Portland, Oregon, with satellite offices in Rotterdam and Singapore supporting the European and Asia-Pacific regions respectively. Acme has never had a workplace safety incident resulting in lost time, a fact leadership attributes to rigorous onboarding and the aforementioned shutoff protocol being drilled into every technician during certification.

6. Compliance & Certifications

All consumer units are CE and FCC certified¹ for sale in their respective markets. Industrial units additionally carry ISO 10218-1 certification² for robot safety and, where applicable, a regional electromagnetic compatibility certificate³ issued by an accredited testing lab.

¹ FCC certification covers Part 15 unintentional radiator rules only; units with the optional LTE module carry a separate Part 22/24 certification not detailed here.

² ISO 10218-1:2011 applies to the robot itself; integrators are separately responsible for ISO 10218-2 compliance of the full installed cell.

³ EMC certificates are issued per-market and expire on a rolling 5-year cycle; contact Regulatory Affairs for the current certificate number before quoting compliance status to a customer.
